Errones: i Como identificar las errong?

"f ~ x2" < hse one función tipo x2

YOBS - POPT & PTOLERANCIA

22005 - 20PF = ZHIK DX; DXX

Con DX; = X; "085" - X; "087"

 $\Rightarrow (DX)^2 = (\chi_{OBS}^2 - \chi_{OBT}^2) \sum_{j,k} (H_{-j})^{j,k} \frac{\partial x}{\partial x^j} \frac{\partial x}{\partial x}$

 $(A \times)_{j,k} \leq G_{LOT} \sum_{j,k} (H_{-j})^{j,k} \frac{\partial x^{j}}{\partial x} \frac{\partial x^{k}}{\partial x}$ $(A \times)_{j,k} \leq G_{LOT} \sum_{j,k} (H_{-j})^{j,k} \frac{\partial x^{j}}{\partial x} \frac{\partial x^{k}}{\partial x}$

→ 8xi= e TOL (H");;

Scipy se detine condo:

F_{K+1}-f_K < e o tolerancia relativa.

max(f_{K+1}f_K1)

 \Rightarrow $|e_{10L} = e \cdot \max(f_{k+1}, f_{k}, 1)|$

4Ch is Archille An Comparente Principles

Petomeron of problem original

A.X = B; A man can man siendo m el # de observaciones y

n el # de parámetos. ({pi, pr...})

$$\mathbb{B} = \begin{pmatrix} p^{\mu} \\ p^{\tau} \end{pmatrix}$$

le ides en describir lineclmente

P, X, + P2 x2 + ... + Pn xn = b con {x, x2, ..., xn; b} observeions

=> encenter los pesos.

Suberos que pour la minimación, L(x;A,B) $L(B|;B) = \frac{1}{2m} \sum_{j=1}^{b} (b_j - \hat{b}_j) \quad con \quad b_j = \sum_{k=1}^{b} x_{jk} P_k$ França (2)

¿ Ovin o In MA? Es la metris de covarienza.

¿Cost es el principio o bida! Encontar um conjunt de vertales (yi) tel que maximien la vertense... É lorgue?

Entonker
